## What Drives MAPTS Success?

MAPTS has developed a unique fast-tracked, PROVEN program that builds confidence by supporting you through the learning process. Our approach of See-Learn-Do is balanced with easily understood and visually demonstrated hands-on instruction, clear and achievable goals and expectations. Instructors provide encouragement, support, and feedback that result in a highly successful experience for every student.

That said, this is not an easy course. **A student's success is earned by their 100% commitment to learning.**

Our "soft skills" training challenges you to strive to do your very best by setting personal goals, venturing outside of your comfort zone and not giving up.

You may recognize patterns that don't result in positive personal and work-related outcomes, and you may even change your approach to how you manage daily challenges in your life.

*With the expansion four years ago of MAPTS' multi-industry training site which is situated in Interior Alaska, 30 miles south of Delta Junction, MAPTS has delivered its training to an audience of multicultural participants from rural villages and urban areas across Alaska and Canada.*

*Through customized hands-on training and connections to employers, our Indigenous students strengthen their career opportunities and achieve winning results in the workforce.*

## Student Success is supported using a simple model:

### Remote Camp Facility

Eliminates distractions that interrupt the learning process.

### Simulated Training

MAPTS underground heavy equipment operators utilize a state-of-the-art multi-million dollar heavy equipment simulator, which is a testing ground that instills recognized industry and manufacturers' best practices, policies and procedures. This quickly advances to hands-on operator training in the actual heavy equipment.

### Employability / Soft Skills

The Employability and Soft Skills module is infused throughout the program, as well as through daily pre-shift, on-shift, and post-shift activities. We specialize in workforce training that elevates confidence and relevant skills and provides participants with insight into preparation for career advancement and leadership development. Instructors provide the participant with skills that deliver positive results for both the employer and employee, resulting in increased retention rates and job satisfaction.

### Real-Life Training Activities

The majority of MAPTS remote site training is activity based. Students quickly advance to hands-on training that leaves little room for boredom and promotes increased confidence and skill. Classroom instruction is supported by a team that can deliver training in ways that support and uplift students that have had negative learning experiences. Additionally, it promotes students' outlook on their ability, potential in their career. It establishes a personal course of action and sets the student up for future successes.
