

InterJet II

Read Me First

InterJet II—Model 2200

Thank you for choosing IBM Small Business WebConnections™ and the Whistle InterJet® II, the fastest and easiest way to connect your business to the Internet.

Please read this entire document. It contains important information that you should be aware of when setting up and using your InterJet. It also describes Netscape® Communicator 4.5 and the other third-party programs that came with your InterJet.

Before You Begin Setting Up the InterJet

This section provides an overview of the InterJet installation and configuration process, and includes important information that you should know before setting up the InterJet.

Installation Overview

To install your InterJet, follow the instructions in *Installing the InterJet II*, beginning in Chapter 2. There are four basic phases in the installation process:

- **Phase 1:** Connect your InterJet to your telecommunications service line and network.
- **Phase 2:** Set up your first computer to communicate with the InterJet and access WhistleWare, the InterJet system software.

- **Phase 3:** Using the first client computer, configure the InterJet, set up WhistleWare for your organization, and create user accounts.
- **Phase 4:** Set up other client computers on your network.

Important: Before installing and configuring your InterJet, you should be aware of the following information:

- When using the InterJet II Setup CD-ROM to install and configure TCP/IP on a client computer running Windows® 95 or 98, InterJet II Setup replaces any existing TCP/IP settings with InterJet-compatible settings. To preserve a computer's existing TCP/IP settings for a network component—for example, settings for a dial-up adapter that provides access to a personal Internet service provider (ISP) account—write them down. Once you have set up the computer to communicate with the InterJet, you can restore your TCP/IP settings for the component.
- WhistleWare requires a minimum screen resolution of 800 by 600 pixels. However, at this minimum resolution, you may need to close your Web browser's toolbars to see some WhistleWare pages without scrolling.
- *Installing the InterJet II* includes instructions for setting up leased-line (synchronous line), cable modem, and serial port WAN (wide area network) connections. However, these connection options are not yet available.

If Your Network Includes Only Macintosh Computers

The InterJet does not currently include a setup program that you can use to automatically set up a Macintosh® computer as your first client computer. If your network does not have any Windows 95 or 98 computers, follow these steps when setting up a Macintosh computer on which you can configure the InterJet:

- 1 Once you have installed the InterJet hardware, set up a Macintosh computer manually, as described in *Installing the InterJet II*, Chapter 6.
- 2 Start your Web browser, then type `interjet` in the browser's **Location** or **Address** box.
- 3 Log in to the InterJet, using the login name `admin` and the password `admin`.
- 4 Continue the InterJet configuration process—described in *Installing the InterJet II*, Chapter 3—with step 4, “Configure the InterJet.”

Once You Have Set Up the InterJet

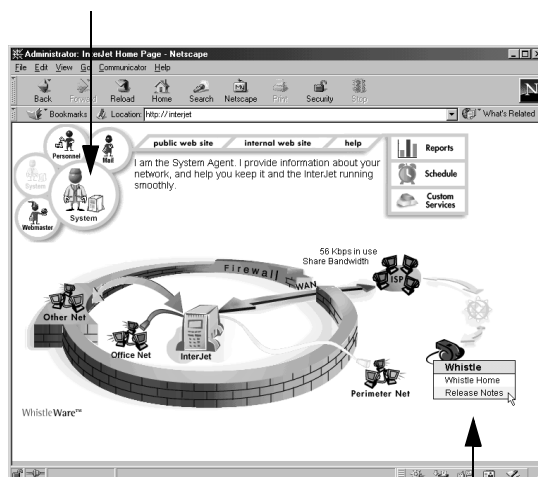

Once the InterJet is properly configured and running on your network, please read the online Release Notes, which provide information about known issues, usage tips, and key features available in the current software release.

To access the online Release Notes, follow these steps:

- 1 To start WhistleWare, double-click the **InterJet** icon on your desktop, if available, or type **interjet** in your Web browser's **Location** or **Address** box.

The InterJet home page appears.

- 2 If the System Agent View is not currently selected, in the Agent Selector, click **System**.
- 3 Point to the **Whistle** object, then on the Whistle menu that appears, click **Release Notes**.

Tip: Whistle Communications recommends that you read *Getting Started with the InterJet II*, which provides an overview of WhistleWare and includes tips for using WhistleWare effectively.

About Your Bundled Software

The InterJet includes Netscape Communicator 4.5 for both Windows 95 and 98, and Mac® OS, as well as other useful programs. The following table describes the programs included with your InterJet, either on the InterJet II Setup CD-ROM or the software folder on the InterJet—or both—at the time this document was printed. The programs included with your InterJet are subject to change.

Program	Platform	Description
 Netscape Communicator	Windows 95/98 Mac OS	A communications suite that includes the following programs: Navigator —A Web browser that lets you display Web pages that reside either on the World Wide Web or on your intranet. Messenger —A mail program that lets you send e-mail messages to and receive them from people both inside and outside your organization. Composer —A Web-page-authoring program, or HTML editor, that you can use to create your personal Web sites and your organization's public and private Web sites, and automatically publish them on the InterJet.
 Xitami Web and FTP server	Windows 95/98	HTTP (Web) and FTP (File Transfer Protocol) server software that lets you provide Web and FTP services on a Windows 95 or 98 client computer, either to users on your private network or to people on the Internet. You can also use this software as an FTP server on which the InterJet can automatically save backup files of its data. Refer to InterJet Help for information about creating automatic backup files.
 Adobe® Acrobat® Reader	Windows 95/98 Mac OS	A program that lets you view and print Portable Document Format (PDF) files. You can use Acrobat Reader to view and print InterJet documents that are available on the InterJet II Setup CD-ROM.
MacTCP Ping	Mac OS	A network diagnostic tool that you can use to determine whether a computer can communicate with another computer on your network or the Internet.

Tip: You can obtain a free copy of Eudora Email, a mail program that provides APOP password encryption. Using this program, you can retrieve e-mail messages from the InterJet mail server using a computer at a remote location. Download a free copy of this program on the Qualcomm Eudora Web site:
